DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The instantly claimed process for the production of aminophosphonic acid derivatives is neither disclosed nor fairly suggested by the closest prior art: Kobayashi et al (Journal of the American Chemical Society, 2003, 125 pages 2507-2515. Kobayashi teaches (Page 2508, column 2, top, Table 1) a process for the condensation of a silyl enol ether with an N-acyliminoester in the presence of copper triflate and a chiral diamine ligand. Kobayashi, however, neither discloses nor fairly suggests that his process be modified by substituting a starting material in which a phosphoric ester replaces the carboxylic ester employed by Kobayashi. One of ordinary skill in the art would not, therefore, have had a reasonable expectation for success in making such a modification. This is especially true in the case of an enantioselective reaction. The instantly claimed process is therefore patentable over the teachings of Kobayashi, the closest prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
